

# New Tab Bookmarks Extension

This document contains a complete list of all features and functions that have been part of the Bookmark Dashboard Chrome Extension across all versions, from v0.0.1 through v2025.9.16.

## Core Dashboard Features

1. **New Tab Page Replacement** Replaces Chrome's default new tab with a customizable bookmark dashboard
2. **Bookmark Cards** Organized sections that group related bookmarks together with customizable titles and colors

## Bookmark Management

3. **Add/Edit/Delete Cards** Full CRUD operations for bookmark cards through edit mode
4. **Add/Edit/Delete Links** Manage individual bookmarks within cards
5. **Sub-links** Nested bookmark organization with expandable sub-menus that appear on hover
6. **Starred Sub-links** Mark important sub-links as starred for priority display
7. **Quick Links Display** Primary links shown directly on cards for quick access

## Visual Customization

- |   |  |
|---|--|
| 8. <b>Icon Library</b>                  | 100+ Material Design/Heroicons SVG icons for bookmark customization              |
| 9. <b>Icon Picker with Search</b>       | Enhanced icon selection interface with search functionality and categorization   |
| 10. <b>Icon Styles</b>                  | Toggle between outline and filled icon variants                                  |
| 11. <b>Adjustable Icon Stroke Width</b> | Fine-tune icon appearance with variable stroke widths                            |
| 12. <b>Color Picker</b>                 | Comprehensive color selection for cards and links with Tailwind v4 color palette |
| 13. <b>Theme System</b>                 | Multiple predefined themes (light, dark, midnight, sunset, ocean, forest, etc.)  |
| 14. <b>Dynamic Theme Switching</b>      | Real-time theme changes without page reload                                      |
| 15. <b>CSS Variable-based Theming</b>   | Modern theming architecture using CSS custom properties                          |

## Layout & Responsive Design

- |                                       |   |
|---------------------------------------|---|
| 16. <b>Masonry Grid Layout</b>        | Smart responsive grid that adapts to screen size              |
| 17. <b>Adjustable Card Width</b>      | Five size options (xs, sm, md, lg, xl) for card width control |
| 18. <b>Container Margin Settings</b>  | Customizable margins (none, narrow, medium, wide, xwide)      |
| 19. <b>Uniform Card Height Option</b> | Toggle to maintain consistent card heights                    |

- |                                    |   |
|------------------------------------|---|
| 20. <b>Maximum Columns Control</b> | Set max number of columns in the grid                   |
| 21. <b>Responsive Breakpoints</b>  | Automatic layout adjustments for different screen sizes |

## Drag & Drop Functionality

- |                                 |   |
|---------------------------------|---|
| 22. <b>Card Reordering</b>      | Drag cards to rearrange their position                    |
| 23. <b>Link Reordering</b>      | Drag links within cards to reorder them                   |
| 24. <b>Visual Drag Feedback</b> | Highlighted drop zones and drag preview during operations |
| 25. <b>Order Persistence</b>    | Maintain custom ordering across sessions                  |

## Data Storage & Sync

- |   |  |
|---|--|
| 26. <b>Chrome Storage API Integration</b> | Uses Chrome's built-in storage system                              |
| 27. <b>Sync Storage Support</b>           | Cross-device synchronization via Chrome Sync                       |
| 28. <b>Local Storage Fallback</b>         | Automatic fallback when sync storage unavailable or quota exceeded |
| 29. <b>Hybrid Storage System</b>          | Intelligent sync-first approach with local mirroring               |
| 30. <b>Background Service Worker Sync</b> | Real-time bidirectional sync between local and sync storage        |

- |  |                       |
|--|-----------------------|
| 31. <b>Device ID Tracking</b><br>made last changes                 | Track which device    |
| 32. <b>Offline Queue Management</b><br>when offline for later sync | Queue changes         |
| 33. <b>Sync Status Indicator</b><br>sync state in UI               | Visual feedback for   |
| 34. <b>Storage Quota Monitoring</b><br>to prevent quota issues     | Track storage usage   |
| 35. <b>Chunked Data Storage</b><br>chunks for sync storage limits  | Split large data into |

## Data Management

- |   |                    |
|---|--------------------|
| 36. <b>Import/Export Settings</b><br>complete dashboard configuration as JSON | Backup and restore |
| 37. <b>Reset to Defaults</b><br>restore default configuration                 | Clear all data and |
| 38. <b>Reset Layout Settings</b><br>configurations while preserving bookmarks | Reset only layout  |
| 39. <b>Data Migration System</b><br>migration when updating extension         | Automatic version  |
| 40. <b>Recovery Script</b><br>tool to restore lost bookmarks from backups     | Emergency recovery |

## User Interface Features

- |   |                     |
|---|---------------------|
| 41. <b>Edit Mode Toggle</b><br>and edit modes for card management | Switch between view |
|---|---------------------|

42. <b>Modal System</b> interfaces for forms and settings	Clean modal
43. <b>Sub-links Modal/Tooltip</b> popup showing nested bookmarks	Hover-triggered
44. <b>Settings/Options Page</b> configuration management	Dedicated page for
45. <b>Popup Extension Icon</b> settings via extension icon	Quick access to
46. <b>Live Preview Mode</b> changes before saving	Preview layout
47. <b>Visual Feedback Messages</b> notifications for user actions	Success/error
48. <b>Keyboard Shortcuts</b> quick navigation	ESC to close modals,

## Performance & Architecture

49. <b>Manifest V3 Compliance</b> Chrome extension standards	Built using latest
50. <b>Content Security Policy</b> implementation with no inline scripts	Secure
51. <b>Pure JavaScript</b> required, vanilla JS implementation	No build process
52. <b>Preline UI Components</b> components for consistent UI and UX	Use Preline
53. <b>Module-based Architecture</b> structure with separate modules	Organized code
54. <b>Event-driven Updates</b> component communication	Custom events for

- |  |           |
|--|-----------|
| 55. <b>Debounced Operations</b><br>performance for frequent operations | Optimized |
|--|-----------|

## Network & Status Features

- |   |                     |
|---|---------------------|
| 56. <b>Online/Offline Detection</b><br>status for sync operations | Monitor network     |
| 57. <b>Network Status Listeners</b><br>changes                    | React to connection |
| 58. <b>Sync Queue Processing</b><br>changes when coming online    | Process pending     |
| 59. <b>Last Sync Time Tracking</b><br>was last synchronized       | Display when data   |

## Backup & Recovery

- |  |                       |
|--|-----------------------|
| 60. <b>Automatic Local Backup</b><br>to local storage              | Save backup copies    |
| 61. <b>Manual Recovery Tool</b><br>for emergency data recovery     | JavaScript snippet    |
| 62. <b>Chunked Data Reconstruction</b><br>chunked storage format   | Rebuild data from     |
| 63. <b>Version-specific Migrations</b><br>changes between versions | Handle data structure |

## Version-specific Features

- |   |                      |
|---|----------------------|
| 64. <b>Storage Fix Module</b><br>handle storage issues (storage-fix.js) | Special module to    |
| 65. <b>Broken Version Recovery</b><br>fallback/debug version            | newtab-broken.js as  |
| 66. <b>Enhanced Icon Utils</b><br>manipulation utilities                | Advanced icon        |
| 67. <b>Theme Manager Module</b><br>theme management                     | Dedicated module for |
