

Content

Tailwind CSS Dividers and <hr>

Insert a horizontal rule or a thematic break to divide or separate sections.

Example

The `<hr>` element has been simplified. Similar to browser defaults, `<hr>`'s are styled via `border-top`.

```
<hr>
<hr class="border-gray-800 dark:border-white">
<hr class="border-gray-500 dark:border-neutral-500">
<hr class="border-teal-500">
<hr class="border-blue-500">
<hr class="border-red-500">
<hr class="border-yellow-500">
<hr class="border-white">
```

Height

Control the height of the `<hr>` with border-width classes.

```
<hr>
<hr class="border-2">
<hr class="border-4">
<hr class="border-8">
```

With label

Left, center and right aligned dividers with label.
